

Fuel Delivery System

We can provide skid mounted pump and filter packages and skid mounted accumulators for your facility.

Features

- Atec's fuel system is designed to support military afterburning engines at up to 90,000 lb/hr flow-rates
- Proven supply system for F100/F119/F135 engine test requirements
- It is a direct replacement for the current A/M37T-20 fuel pumping trailer system with many additional features.
- User may elect to provide tank as an option.
- Pump/filter package and accumulator skid package are independent for user placement optimization and ease of shipment.
- Fuel flow measurement integrated on-skid
- Skid packages pre-assembled at Atec's factory to facilitate quick site installation and piping connection.
- The system is fully compatible with all existing engine adapter kits and equipment, including all F100 engine types.

Key Advantages

- Designed to support military afterburning engines at up to 90,000 lb/hr flow-rate
- Direct replacement for current A/M37T-20 fuel pumping trailer system
- Pump/filter package and accumulator skid package are independent for user placement optimization and ease of shipment.
- Fully compatible with all existing F100 engine adapters and equipment.
